

How much does a charging distribution box cost

Overview

The honest answer in 2025: it can be anywhere from about \$7,000 per Level 2 port to \$250,000 or more for a single high-power DC fast charger, once you add installation, utility work, and software. Are you considering installing a charging station for your electric car but wondering about the actual cost of the equipment and installation?

Unlike articles that focus on the cost per kWh, here we break down the initial investment needed for a home charging station, as well as the rates charged. When planning a commercial EV charging project, installation cost can vary dramatically — from a few thousand dollars for Level 2 AC chargers to over \$100,000 for high-power DC systems. At Ekiz Energie lie the home charging station costs for the hardware between €399 and €3. Equipment cost is the main expenditure, including sourcing chargers, building infrastructure, and other transportation and insurance costs.
