

How much does the North Asia micro module cost

Overview

The Romanian Prime Minister Ilie Bolojan estimated the cost at \$6-\$7 billion and said "the complexity of such projects and the technology being in early days, I estimate we will not see the investment immediately. " NuScale and the Utah Associated Municipal Power Systems (UAMPS) announced costs of a 462-megawatt small modular reactor (SMR) have risen dramatically. When UAMPS reduced the size of the carbon-free power plant (CFPP) to six modules in the summer of 2021, it raised the target. As of 2025, the company has a number of contracts under negotiation around the world. The NRC and its Advisory Committee on Reactor Safeguards identified several safety risks in the design for the reactor, in.

Small Modular Reactor Update: The Fading Promise of Low-Cost

Even if the new target price is only in the range of \$90 to \$100 per MWh, there is no guarantee that this will be the actual price that communities will pay for the power from the CFPP.
