

# **How to apply quotas for optical modules**

## Overview

---

Answer: See Available Quotas by Service, which lists all quota names under each service. Google Cloud uses quotas to help ensure fairness and reduce spikes in resource use and. Each quota represents a specific countable resource, such as the number of virtual machines you can create, the number of storage accounts you can use concurrently, the number of networking. Integrated circuits and reference designs help you create a smaller and faster optical module design used in high-bandwidth data communication applications. Whether you are creating a 100-Gbps or 400-Gbps, small form-factor pluggable (SFP) module, SFP+ transceiver, XFP module, CFP, X2/XENPAK module. Quota plans are named sets of memory, service, log rate, and instance usage quotas.
