

How to quickly locate fiber optic cable break points

Overview

An optical visual fault locator is a simple yet powerful tool for identifying problems in fiber optic cables. Finding a break in a fiber optic cable can be challenging but is essential for maintaining a stable network. With CommMesh's advanced tools and solutions, you'll learn how to restore networks seamlessly. Optical Time Domain Reflectometers (OTDR) provides graphical data and analysis along the entire length of a cable, way beyond the reach of a VFL, but they can be expensive and require more time to and skill to operate.
