

# **How to read the optical cable tag**

## Overview

---

Yellow indicates single-mode fiber, while orange and aqua mark multimode fibers. The most efficient labeling system for fiber optic cables comprise these key components: The cable identifier: An alphanumeric code that differentiates this cable from other cables within your facility. Make sure you use a consistent format, such as "FB-03-A142" where FB indicates fiber, 03 is. The text on the cable starts with the Corning product name "Corning Rocket Ribbon (TM) Optical Cable," date of manufacture "01/2022" and a serial number. Misidentification can cause downtime, disrupt essential services, and create safety hazards in data centers. Industry standards like TIA-606-B guide professionals to use color codes, print legends, connector types, and. These markings are your guide to understanding the cable's capabilities, construction, and compliance with safety standards.
