

# **How to represent hot-dip galvanized cable trays**

## Overview

---

The full-shaped HDG trays are dipped into a large bath of hot, liquid zinc. It is this heavy shield that makes the metal resistant to rain and salt air for over 20 years or more. When we talk about hot-dip galvanized steel cable trays, we are not referring to one single tray design, but to the surface finish applied to different families of cable management systems: Cable ladders and other self-supporting systems for long spans. The process involves several steps, including surface preparation, zinc alloy formation, and cooling.
