

# **How to tie and pull the optical cable in the middle**

## Overview

---

Always attach your pull string or pull tape to the Kevlar aramid yarn (the strength member) inside the cable. For pre-terminated cables, use a specialized pulling eye mesh that distributes the tension evenly. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. It is imperative that certain procedures be followed in the handling of these cables to avoid damage and/or limiting their usefulness. Outdoor cable may be direct buried, pulled or blown into conduit or innerduct, or installed aurally between poles. When the fiber is subjected to an impact from the side, it will break, and it doesn't take much force to do it.
