

# **How to use the light pen on the fiber optic terminal box**

## Overview

---

Shortly press the power button, the indicator light flashes, and the laser pulse wave is output at the same time; short press again to turn off the red light. Under normal circumstances, it will automatically shut down if there is no operation for 15 minutes to extend the battery. When it comes to testing fiber optic cables, a Visual Fault Locator (VFL) is an essential tool in your toolkit. How to use a fiber optic red light pen?

What are the uses of fiber optic red light pens?

Optical fiber red light pen (i. , optical fiber fault detector, optical fiber fault test pen) is a 650nm ( $\pm 20$ nm) semiconductor laser as a light-emitting device, which emits stable red light through a constant.

## **Light Pen 10mW**

The Light Pen 10mW is an advanced visual fault locator designed to identify and pinpoint faults in fiber optic cables with high precision. This essential tool is ideal

[Read More](#)

## **How to Use a Visual Fault Locator (VFL): A Step-by**

A VFL is used to detect faults, breaks, or bends in fiber optic cables by emitting a bright red light that is visible even through the fiber's jacket. It's a cost

## **How does visual fault locator pen work?**

Within the pen, a small but powerful laser sends out an intense red light. The pen has a laser in it, so when you push the button on the pen it sends very bright light down through the fiber
