

How to view the IP address of the aggregation switch

Overview

The management touchscreen on the front panel of the switch allows you to view the switch's firmware version, LAN IP address, and port status; Adjust the switch's fan speed and restart the switch. The topology view allows you to remotely access, manage and monitor all discovered IP devices in your product's network, for example via a tablet or a smart phone. If you set IP obtaining mode to Auto, you can click in the Operation column of the created subnet to modify the subnet information and configure the static management IP. Is there a way I can find the list of IP addresses connected to a switch (may be Unix command), so that I can visit each desk, run a command, and check all the active IP addresses (computers) connected to that switch, and based on that I can find out to which switch that specific IP address is. Finding the IP address of your network switch is crucial for a variety of tasks, from configuring its settings to troubleshooting network connectivity issues. While it might seem like a technical hurdle, several straightforward methods can help you uncover this essential piece of information.

How to view the IP address of the aggregation switch

Check all the active IP addresses on a switch

You need to relate the IP address to the MAC address. This is what ARP does. You can ARP with the IP address to discover the MAC address. Then,
