

Intelligent PDU Allocation Unit

Overview

Intelligent power distribution units are advanced tools designed to monitor, manage, and optimize power usage in a data centre. These devices help you enhance energy efficiency by reducing waste and ensuring precise power allocation. While both can provide reliable power distribution to critical IT equipment within a rack or cabinet, intelligent PDUs offer several smart features to help data center managers understand their power. The range consists of four models offering various levels of power monitoring and power switching features, and can be manufactured as single, dual or 3-Phase with a choice of socket types and mains lead. An integral component of modern data centers is the Intelligent Power Distribution Unit (PDU).
