

Intelligent energy storage cabinet 48V used for oil pipeline monitoring

Overview

Engineered to support critical infrastructure, the RAFT integrates a high-performance solar array with intelligent power and control systems, housed in a thermally insulated cabinet built from 316L stainless steel. Their modular design enables scalable 48V/72V configurations, supporting continuous operation of sensors, telemetry, and communication gear. SLB's pipeline integrity monitoring systems—part of the Optiq™ fiber-optic solutions family—enable pipeline operators to perform accurate leak detection and pig tracking while protecting pipelines from third-party intrusions and detecting ground movements, such as earthquakes and subsidence. Such architecture assists decision-making, driven by data and based on intelligent analytics. This report delves into the implementation of IoT solutions for pipeline monitoring, focusing on a detailed case study that illustrates the successful deployment of these technologies for real-time pipeline monitoring and leak detection.
