

Overview

Data center interconnect solutions play a crucial role in colocation and multitenant data center environments, enabling seamless communication, efficient data transfer, and robust connectivity between facilities while supporting scalability, redundancy, and performance. Using DWDM (Dense Wavelength Division Multiplexing) optical transmission technology is one of the most effective. Our solutions can be tailored to your unique needs to successfully and reliably address diverse data center interconnect (DCI) applications. With data centers clustered in 27+ metros, DataBank offers you a unique opportunity to geographically diversify your IT infrastructure and workloads for greater resilience and put them closer to users at the edge for higher performance.

Inter-data center interconnection solutions

Data Center Interconnect Solution Overview

The term DCI (Data Center Interconnect) is relevant in all scenarios where different levels of connectivity are required between two or more data center locations in order to provide flexibility for deploying
