

Is ADSSA fiber optic cable flame retardant

Overview

Cables must be designed for the worst-case combinations of temperature, ice load, and wind. On long spans where utilities already experience caused by sustained high wind, dampers may need to be installed on ADSS cable also. The cable features a polyethylene inner sheath, longitudinally wrapped with coated aluminum tape, and an outer flame-retardant sheath extruded over coated steel tape, offering excellent mechanical performance and fire resistance for diverse environments. GYFTZY (non-metal flame-retardant fiber optic cable) is strictly not a special fiber optic cable for our power fiber optic cable. But when our power optical cable line enters the substation, the substation has strong current occasions, and the requirements for lightning protection and flame.

Is ADSSA fiber optic cable flame retardant

Wholesale 24 Core Single Mode Fiber Optic 1k+ , Alibaba

Shop high-quality 24 core single mode fiber optic cables for outdoor use. Enjoy reliable performance and durable construction. Perfect for telecommunications.

OverviewApplication issuesConstruction detailsAccessories and installation

Cables must be designed for the worst-case combinations of temperature, ice load, and wind. An installed cable must not sag so low that it can be damaged by traffic under the line. On long spans where utilities already experience conductor galloping caused by sustained high wind, dampers may need to be installed on ADSS cable also. The cable specifications should allow for operation at the lowest expected temperature.
