

Longitudinal stripping of optical cable in the middle

Overview

A Fiber Optic Longitudinal Slitter is a precision-engineered mechanical device designed to slit the outer jacket of fiber optic cables along their longitudinal axis. The sharp blade is made of super-alloy, suitable for longitudinal stripping of outdoor optical loose tube cable. The stripping opens the tube on upper and lower sides for easy access of the fiber. It easily slits the PVC cable jacket into two halves before crimping, in both field and plant applications, time is saved and consistency is resulted with this precise and innovative tool.

Longitudinal stripping of optical cable in the middle

Fibre Strippers

Designed to slit and ring fiber optic cables from 1.2 mm to 7.5 mm (0.05" to 0.3") in diameter, this cable slit and ring tool is perfect for slitting and ringing cables, buffer tubes, and jackets on fiber optic cables.
