

# Malta cable tray width

## Overview

---

This trunking is commonly used in offices, homes, and commercial buildings. In practice, cable tray dimensions are a system of interrelated measurements—width, depth, length, and material thickness—that directly affect cable fill compliance, heat dissipation, structural loading, and long-term expandability. They are typically made of metal, such as steel or aluminum, and are designed to provide a safe and efficient way to route and protect.
