

Mini-module cold aisle components

Overview

Most parts of the aisle containment components are designed by modular, which allows quick deployment on site and address changing needs or future expansion with pay-as-you grow architecture. It manages airflow at the source, increases the cooling efficiency and significantly lowers down operating costs. A factory-installed full perimeter compression gasket seals the door frame and minimizes air leakage. Adaptable to hot and cold aisle containment, the Vertiv Aisle Containment system allows you to deploy containment before or after racks are installed to simplify installation and speed deployment of new data center equipment.

Mini-module cold aisle components

Aisle Containment , Modular Cleanroom & Data Center Containment

Our modular systems provide flexible, secure separation between hot and cold aisles or controlled zones to maintain optimal environmental performance.
