

Multi-switch access loop

Multi-switch access loop

Routing & Switching Design , Validated Solution Guide

Stacking allows multiple access switches to be connected to each other and behave like a single switch. Stacking combines multiple physical devices into one virtual switch, increasing port

Loop-AM3440 Access DCS-MUX

DescriptionThe Loop-AM3440-A/B/C series products are Access DCS-MUXs which support multiplexing of various digital access interfaces into E1 or T1 lines for convenient transport and switching. The

Multi-service Access Node TDM / IP

The Loop-AM3440-A-CGA is an economical STM-1/4 (OC-3/12) access multiplexer. It is designed to combine digital access interfaces, including TDM, IP, and voice
