

# Multicast on Access Switch

## Overview

---

Multicast is used to send a stream of data (like a video stream) to many endpoints at once using a bandwidth-efficient method. IP multicast routing: IP multicast routing is a method used in IP networks to efficiently deliver data from one source to multiple destinations simultaneously. 13 Multicast Guide for 6200, 6300, 6400, 8320, 8325, 8360, 8400, 10000 Switch Series AOS-CX10. This document provides detailed guidance for configuring both Layer 2 and Layer 3 multicast services, common problems in the configuration, and suggestions on the use of the IGMP snooping function.

## Multicast on Access Switch
