

**ZTP Thermal & Power**

# **Network Security Device Deployment Simulation**

## Overview

---

Free browser-based networking and security simulators for students preparing for CCNA, CCNP, Security+, CEH. Cisco IOS, Palo Alto, Fortinet, ISE, DNAC, Zscaler, SD-WAN, vManage and attack simulation labs. Ransomware, DDoS, insider threat scenarios with interactive CLI and live network visualization. Even professionals could benefit from these tools by simulating network environments and get an idea of how a network will work before actual. Start the classroom foundation now with class creation, join-by-code flows, roster visibility, and a first shared dashboard. Key Features: Pros: Cons: Best For: Students, educators, and beginners looking to learn. Welcome to the Master Network & Security Simulation with PNETLab course — a complete, hands-on training program designed to help you create professional virtual labs for networking, firewalls, and cybersecurity.

## Network Security Device Deployment Simulation

---

### Application-level Simulation for Network Security

NeSSi (network security simulator) is a novel network simulation tool which incorporates a variety of features relevant to network security distinguishing it from general-purpose network simulators. Its
