

New EMS Solution for Jamaica Data Centers

Overview

Major projects now deploy clusters of 20+ containers creating storage farms with 100+MWh capacity at costs below \$280/kWh. The solution adopts new energy (wind and diesel energy storage) technology to provide a reliable guarantee for the stable operation of communication base. ReadyPod Technologies offers an advanced Environmental Monitoring System (EMS) designed specifically for data centers, edge containers, smart racks, and containment zones. Known as the eGov Data Centre, works began in 2020 on the upgrade project, which was managed by the Transformation Implementation Unit (TIU). The IS Data Center EMS, as a key solution within the IS for Building & Infrastructure portfolio, combines cutting-edge technologies—such as Digital Twin, AI, and IoT—to deliver real-time energy optimization and improved operational efficiency.
