

# **Niger Outdoor Self-Supporting Butterfly Drop Cable**

## Overview

---

The cable features a butterfly structure for easy stripping and installation, with water-blocking materials and a polyethylene sheath, offering waterproofing and durability, widely used in FTTH network indoor/outdoor wiring. GJYXFCH Cable is Self-supporting butterfly entry cable, which places the optical fiber in the center, place two parallel steel wires on both sides as reinforcing elements (or non-metallic FRP reinforcing parts), and add a reinforcing element on the outside to extrude a low-smoke halogen-free flame. It is mainly used as a fiber to the home (FTTH) and other fiber optic access (FTTx) network user introduction segment cabling cable for communication between indoor user access points and optical network terminals (ONTs).
