

Non-contact MPO connector

Non-contact MPO connector

Interpretation of Terminology & Differences - MPO and MTP®

The MPO's rise in popularity stems from its unique ability to mate multiple fibres (2-72 fibres) within a single connector body housing therefore significantly reducing a lot of space. This white paper is

[Read More](#)

Understanding the MPO Connector

By definition, the MPO is a multi-fiber connector (a single connector that houses multiple fiber terminations) that is defined by IEC-61754-7, "Fiber optic interconnecting devices and passive

[Read More](#)

Introduction to Non-contact MPO Fiber Connectors

There are two key elements in the NC-MPO connector, first, the fiber surface is recessed, and second, the fiber surface has an anti-reflection coating. It offers

Arrayed Fiberoptics invents non-contact MPO connector

The non-contact design and low working pressure on the NC-MPO connector leads to a longer connector mating life, since the mating does not damage the surface of the device under test.

Sumitomo Electric Introduces NextGen Non-Contact MT

The MPO connector has problems with high spring force requirement to achieve physical contact for MT to MT ferrules, and also has high sensitivity to

[Read More](#)

White Paper

Because of the universal mating capability of some MPOs connectors, it is possible to connect a 12-Fiber MPO to a 24-fiber MPO. But doing so will not result in proper mating and can cause some

[Read More](#)

Revolutional style of MPO , AirMT

By eliminating physical contact by the air gap, it gives low spring force and therefore gives low mating force regardless of the fiber count. In comparison with other similar

technologies, the AirMT has no

Non Contact Fiber Connector

There are two key elements in the NC connector, 1) the fiber surface is recessed, 2) the fiber surface has an anti-reflection coating. It offers vastly improved optical performance and longevity.
