

OTDR Optical Cable Report

Overview

A work report that includes an Optical Time Domain Reflectometer (OTDR) trace is sometimes required after installation or maintenance is completed. OTDR testing analyzes fiber optic cable performance from end to end by testing components along the cable, including connection points, bends, and splices. Its advanced algorithms dynamically define the testing parameters, as well as the number of acquisitions that best fit the network under test.

How best to interpret OTDR traces?

How Do OTDRs Work? Think of an OTDR as radar that sends a pulse of light down the cable, looking for a return signal. When it finds one, the OTDR creates a
