

Optical fiber optic cable color spectrum red head green tail

Overview

This guide explains the latest EIA/TIA-598-D fiber color-coding standard used to identify fiber types, inner fiber sequences, and connector polish styles. With clear tables and updated details, it serves as a comprehensive reference for technicians handling modern fiber optic. There are six fundamental colors in the visible spectrum - These are red, orange, yellow, green, blue, and violet. When we see a rainbow, we are seeing these principal spectral colors and from these colors come all other colors that we see with our eyes. These codes ensure correct organization and connectivity during installation or maintenance processes.
