

Optical module 3434g

Overview

An optical module is a typically hot-pluggable optical transceiver used in high-bandwidth data communications applications. The form factor and electrical interface are often specified by an interested group using a (MSA).

Users of Optical Modules

An optical module is a typically hot-pluggable optical transceiver used in high-bandwidth data communications applications. Optical modules typically have an electrical interface on the side that connects to the inside of the system and an optical interface on the side that connects to the outside world through a fiber optic cable. The form factor and electrical interface are often specified by an interested group using a multi-source agreement (MSA). Optical modules can either plug into a front pa
