

Otu Spectrometer

Overview

We supply compact and ultra-compact spectrometers from leading Taiwanese manufacturer OtO Photonics together with their user-friendly "SpectraSmart" spectral measurement software and a range of lamp- and LED-based light sources. HB2034 & HB2094, SE2030 & SE2090, and OW1030 spectrometer modules, equipped with high SNR and fast sensors, offer customizable resolutions ranging from 0. These modules are highly sought after for environmental monitoring system integration needs and are widely used in applications such. OtO uses a Si-MEMS design combined with a separate USB control board in order to set-up these smallest micro spectrometers. PCR amplicon sequencing may lead to detection of spurious operational taxonomic units (OTUs), inflating estimates of gut microbial diversity. OtO Photonics was founded as "OtO Science" in 2006 in Hsinchu City, Taiwan with the objective of leveraging Micro Electro Mechanical Systems (MEMS) micro grating technology to develop compact spectrometers. OtO's "non-spherical, mass-producible" grating replaced the "collimator - plane grating -".

Operational Taxonomic Unit

Therefore, microbial ecologists that use molecular approaches, such as sequencing of the 16S rRNA gene, apply an operational taxonomic unit (OTU) definition in lieu of species. OTUs are just that:
