

# **PE pipe for power distribution box inlet**

## Overview

---

PE corrugated pipe is a flexible piping system that performs well in both high cover and low cover applications. Despite this relatively short history, the engineering community has embraced the overall toughness and durability of PE pipe and the latitude afforded by the variety of installation methods. Dura-Line's traditional HDPE Standard Conduit products for utilities are of superior-quality. While offering innovative designs to make installation faster, easier, and more productive, Dura-Line manufactures a broad range of sections. The water pressure of 16 bar has reached 32 bar in pipes which are produced with upper limit PE100 raw material. Manufactured from high-quality polyethylene, this durable PE electrical box offers excellent strength, weather resistance, and long-term.
