Pigtail Bare Fiber Protection Tube

Overview

A kind of polyolefin optical fiber protection heat-shrinkable tubing, a protective element specially designed for bare optical fiber in the distribution frame/transition box. They are the bridge between fiber optic cables in the field and the equipment or patch panels that manage them. By combining factory-installed connectors with spliced bare fiber, pigtails ensure that network installers can create. was ISO9001 certificated company established in 2016, located in Ningbo, the biggest port city in China. Multi-fibre pigtails are available as dual, triple, or quadruple types with several choices of packaging style to meet specific installation specifications or can be.
