

# SPD needs to be installed in the distribution box

## Overview

---

You should put your SPD very close to the main busbar in the distribution box. For all other cases SPDs shall be fitted to protect against transient overvoltages, unless the owner of the installation declines such protection and wishes to accept the risk of damage to both wiring and equipment as tolerable. Transient overvoltages are sudden, extremely fast spikes in electrical potential that can be caused by a variety of external and internal factors.
