

Sealing the end of the mesh cable tray

Overview

The bends, tees, crosses, risers and reducers of wire mesh cable tray can be easily and quickly made live at the project by using a bolt cutter. Since the jaws of the bolt cutter drags a layer of zinc across the cut end and forms a protective layer. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. There are three areas on the trailer, the front of it is exposed to the atmosphere and is non-hazardous, the middle section is a compressor unit in an enclosure (C1D2), and back of the trailer which is exposed and contains more piping (C1D2).
