

# Shape of cable tray tee

## Overview

---

A ladder type cable tray tee is a fitting used to create a branch in a cable tray system, allowing cables to be routed in three directions. Its "T" shape provides a secure and efficient way to split cables from a main tray into two separate paths, ensuring organized and flexible ventilation to heat producing cable such as power communication and other with the same or different width of the cable run. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray is used for instrumentation and control applications that require. Materials and finishes available are mild steel pre galvanised as standard with mild steel hot dip galvanised after manufacture and stainless steel grade. Learn about ladder, perforated, solid-bottom, wire mesh, and channel trays in this complete guide.
