

Should fiber optic cables be run through conduits

Overview

New fiber lines can be installed to pass through empty conduits if the bandwidth is needed in the future, thus no new path needs to be trenched. Directly buried cables are exposed to challenges such as rocks, roots, rodents, excavation, frost heaves, and many others. The existing 2" conduit contains 4x 1/0 XLPE cable (rated for direct-burial), so I plan on pulling outdoor rated, non-metallic fiber through the same conduit. My original plan was to trench new conduit and run CAT8, but given that the existing run is all "customer side" and installed by the former. The conduit protects the fragile fiber optic cables from environmental factors and physical damage, ensuring their longevity and optimal.

Should fiber optic cables be run through conduits

How Deep Is Fiber Optic Cable Buried? (2025 Nec Standards& Guide)

Wondering how deep is fiber optic cable buried? We explain the NEC requirements (usually 24-30 inches) and why you need Armored Cable for direct burial projects.
