

Simplify cable tray bends

Overview

This guide explains how to make 90° bends, vertical bends, tees, and offsets in wire mesh cable trays safely and professionally. Click "Calculate" to see the minimum bending radius and the recommended standard tray bend radius (300mm to 900mm) required for safe installation. Since the jaws of the bolt cutter drags a layer of zinc across the cut end and forms a protective layer. Unlike perforated trays, bends can be created directly at site without expensive fittings. Construction of a flat 90° bend (A) The amount of tray lip to be removed is equal to 2, 3/4 the width of the tray, half of this measurement will be removed on either side of the centre line.
