Single-mode optical fiber

OverviewHistoryCharacteristicsConnectorsFiber optic switchesQuadruply clad fiberExternal links

In fiber-optic communication, a single-mode optical fiber, also known as fundamental-or mono-mode, is an optical fiber designed to carry only a single mode of light - the transverse mode. Modes are the possible solutions of the Helmholtz equation for waves, which is obtained by combining Maxwell's equations and the boundary conditions. These

modes define the way the wave travels through space, i.e. how the wave is distributed in space. Waves can have the same mode but have different frequencies. This is the case i
