

# **Tariff Costs AI Server DML**

## Overview

---

server manufacturers and hyperscale cloud companies are expected to collectively pay several billion dollars in tariffs on imported components that power AI systems. America's AI race is accelerating at a blistering pace, and with it, the construction of the most expensive computing infrastructure in history. 7 trillion in data center infrastructure by 2030, with semiconductors representing approximately 54 cents of every dollar spent. The Trump administration has embraced two goals that are fundamentally in tension: an aggressive push to build out. The post-Trump tariff era brought sweeping changes across the global tech landscape, with the AI server market standing at the crossroads of innovation and geopolitical friction. The US data-center sector faces a variety of trade protectionism issues as it looks to build out and deliver the promise of artificial intelligence.
