

# The cable inside the cable tray is buzzing when energized

## Overview

---

The main reason why the cable makes buzzing sounds after being energized is the electromagnetic induction and resonance caused by the cable structure and laying method. First of all, the structure of the cable is an important factor that causes the humming sound. Understanding the root causes of cable tray failures is the first step toward ensuring system reliability. Cable Testing Standards Guide: Instrumentation Cables Testing Standards Designed to address each of. This totally seems to be a fever dream, but I thought during my apprenticeship i saw a video of a cable in a cable tray snapping or jumping up from being over loaded and it was shown because it was giving an example of the importance of supporting conductors to the tray.
