

ZTP Thermal & Power

Two lights are on in the industrial switch

Overview

This requires that SW1 is a SPDT switch, which are commonly available for commercial light switches. When the PIR is turned on, it will turn on either both L1 and L2 (if SW1 is off), or. I'm looking to set up an AC 240-volt lighting circuit consisting of two lights (let's call them L1 and L2), a standard switch (SW1) and a PIR. The switching device will typically consist of a small metal actuator that moves in a vertical or horizontal motion which actuates the opening or closing of. When it comes to controlling multiple lights with multiple switches, it's important to understand how the power flows and how everything is interconnected.
