

Usbkvm switcher not working

Overview

To resolve the USB connection issue, follow these troubleshooting steps:

Check USB Cable Connections: Ensure that all USB cables are properly connected to the KVM switch, PCs, and peripherals. Try using different USB ports on your PCs and KVM switch to rule out port-related issues. If the KVM switch supports infrared remote control or hotkey functionality, use these to test and confirm whether the switching of the KVM switch is faulty. In a normal setup, switching inputs should allow the user to continue working on another computer without reconnecting devices. I've tried wired and unwired keyboards and mice plus a handful of other things like headsets. You'll also learn when it might be time to upgrade to a more reliable, feature-packed KVM switch like Avico's.

Usbkvm switcher not working

a) im not getting any mesgess just the sound effect that hepend when you connect new device (but it may related to that my laptop and desktop connect to 1 mixer so im able to get sound
