

Vietnam AI Server 10G

Overview

LG CNS and VNPT to build a hyperscale AI data center in Vietnam, delivering GPU-optimized, liquid-cooled, high-density capacity. The Vietnam AI Server Market is expanding rapidly as enterprises and research institutions deploy AI-optimized infrastructure to handle growing workloads. Vietnam's digital economy has been expanding at one of the fastest rates in Southeast Asia, driven by strong internet penetration, rising e-commerce adoption, and a rapidly growing startup ecosystem. Technology companies are increasingly deploying AI-driven applications in sectors such as fintech. VNPT's 10G Fiber (XGS-PON) FTTx deployment, combined with multi-Gigabit Wi-Fi 7 connectivity, opens the door to enhanced wireless experiences for bandwidth-intensive applications like streaming, VR and AR. The RTX 5090 with 32GB VRAM is a perfect balance between the costly RTX PRO series and flagship gaming GPUs. Once clustered together, they create large memory pools that can support various AI workloads, something that will always find a customer, and wealthy customers those are.
