

Welding and connecting distribution boxes

Overview

In the manufacturing process of metal distribution boxes, welding constitutes a critical stage following sheet metal cutting and bending. This step ensures the structural integrity of the enclosure by securely joining individual panels into a cohesive unit. The welding and bolt connection of the distribution box made by the distribution box manufacturer shall be firm, and the welding seam shall be uniform and smooth, without welding skin, welding penetration, air hole and other adverse phenomena; The bolt connection shall have flat and spring washer. Learn about their meticulous process, from cutting and crimping wires to sealing connections with heat shrink tubing.

Welding and connecting distribution boxes

Why is the welding process of metal distribution boxes extremely

Continuous welding forms a continuous metal connection, significantly enhancing the overall strength. International engineering projects often require distribution boxes to be capable of
