

West Africa Fiber Optic Cable Undergrounding Project

Overview

The Amilcar Cabral IT cable project aims to connect Cabo Verde, The Gambia, Guinea, Guinea-Bissau, Liberia, and Sierra Leone through a submarine cable network. While submarine communications cables are used to connect countries and continents to the Internet, terrestrial fibre optic cables are used to extend this connectivity to landlocked countries or to urban centers within a country. The objectives of the project are to enhance international telecommunications capacity, improve access to digital services and provide. Orange announced the commissioning and commercial launch of Djoliba, the first pan-African backbone network, covering 8 countries: Burkina Faso, Côte d'Ivoire, Ghana, Guinea, Liberia, Mali, Nigeria and Senegal.
