

# **What are the relay protection devices for power stations**

## Overview

---

Protective relays are special electrical devices used to detect faults in power systems and quickly disconnect faulty parts to prevent damage. These devices act as an investment "insurance," ensuring that equipment and systems are. These relays play a crucial role in the protection of transformers, generators, transmission.

### Chapter 12: Protection Schemes and Substation Design Diagrams

Previous chapters have detailed the make up and operating characteristics of various types of protection relays. This chapter considers the combination of relays required to protect various items of power

### Power System Protection

The protective relay on the other hand must be able to recognize an abnormal condition in the power system and take suitable steps so that there will be least possible disturbance to normal operation.
