

What devices is the optical module connected to

Overview

An optical modules typically integrates an optical transmitting device (TOSA, with a laser), an optical receiving device (ROSA, with a photodetector), functional circuits, a main control circuit board (PCBA), a housing, and optical (electrical) interfaces, among other. Optical modules typically have an electrical interface on the side that connects to the inside of the system and an optical interface on the side that connects to the outside. That is, metal medium communication represented by coaxial cables and network cables is gradually being replaced by optical fiber media. Composition of Optical Modules The optical module, known as Optical Transceiver in.
