

# What does Fiber Optic Multimode LC mean

## Overview

---

Multi-mode optical fiber is a type of optical fiber mostly used for communication over short distances, such as within a building or on a campus. What is Multimode Fiber?

To recap Optical Fiber can be divided into Multimode Fiber (MMF) and Single-Mode optical fiber (SMF). Multimode Fiber (MMF) has a core diameter, typically 50-100 micrometers, has ability to transfer multiple modes of light through the fiber core, uses lower-cost electronics. Although they can do the same job in some instances, the different construction methods make each of them better suited to certain tasks and budgets.
