

What does it mean when the fiber optic signal light on a WFL router is red

Overview

"LOS" stands for Loss of Signal, and the red indicator typically shows that the fiber optic line isn't detected. Gently inspect the cable for physical damage and ensure it's connected properly; if the light remains red, reach out to your provider for a signal check. However, when it blinks red or stays solid red, it signifies a Loss of Signal, a problem preventing your router from communicating. You should also reset the router to its factory settings and download and install a driver system update.
