

What is the distance between fiber optic cable and power poles in meters

Overview

The distance between poles of overhead lines is 25-40 meters in the urban area, and 40-50 meters in the suburbs, and no more than 67 meters in other sections. Overhead fiber optic cable should adopt a galvanized steel strand with the specification of 7/2. by Jeanna Deese and Chris Rivas Power over Ethernet—it may be an old concept, but new applications continue to be identified that are redefining. There are three main reasons for this: First, high-bandwidth signals are more susceptible to chromatic dispersion than. Fiber optic transmission distance varies based on fiber type, environmental conditions, and equipment selection.
