

What is the lifespan of cables in cable trays

Overview

Lifespan (15-20 years): The cable tray lifespan of fiberglass trays typically ranges from 15 to 20 years. They are highly resistant to corrosion, especially in environments like sewage treatment plants, chemical processing facilities, and offshore oil rigs. Understanding the durability of different cable tray materials is essential for choosing the best solution for your project. When completely installed, without damage either to conductors or structural system use maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to si osure, overheating or.
