

What router speed should I use for my home fiber optic connection

Overview

For fiber optic internet speeds of 100 Mbps or higher, a router supporting at least 1 Gbps is required. Look for routers with AX or AC designations (Wi-Fi 5 or 6) that support faster speeds than older N standards (Wi-Fi 4). Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. With the many options available on the market, picking the best router for fiber internet can be tricky. A gig fiber connection will provide around 1,000 Mbps download and 1,000 Mbps upload —but you won't always see those numbers if you run a speed check on your computer. TP-Link AX1800 WiFi 6 Router V4 (Archer AX21) - Dual Band Wireless Internet Rating: 9.
