

# What size cable is used in the lighting distribution box

## Overview

---

This size is suitable for most lighting circuits, assuming they are protected by a 6A circuit breaker in the consumer unit. 5mm<sup>2</sup> cores is typically used for power circuits and a cable with 1mm<sup>2</sup> cores is typically used for lighting circuits. Two core and earth cable: This cable connects the consumer unit (fuse box) to the power outlet sockets and carries the electricity to appliances which are plugged in. The following step-by-step guide will show you how to calculate the correct size of cable and wire, or any other conductor, for electrical wiring installations with solved examples in both British or English and SI Systems, i.
