10 Gigabit Ethernet

OverviewOptical fiberPhysical layer modulesCopperWAN PHY (10GBASE-W)

There are two basic types of optical fiber used for 10 Gigabit Ethernet: single-mode (SMF) and multi-mode (MMF). In SMF light follows a single path through the fiber while in MMF it takes multiple paths resulting in differential mode delay (DMD). SMF is used for long-distance communication and MMF is used for distances of less than 300 m. SMF has a narrower core (8.3 um) which requires a more precise termination and c
